

## **AMENDMENT TO THE SPECIFICATION**

**Please replace the paragraph beginning on page 12, line 18 and ending on page 13, line 6 with the following amended paragraph marked up to show changes made relative to the immediate prior version:**

Figure 5 is a flow diagram illustrating the processing of the generate replacement component in one embodiment. This component replaces content of a tag with an include content tag and stores the content in the custom content bundle. In block 501, the component creates a new content identifier. In one embodiment ~~to~~ the content identifier is the name of the DOM version of the JSP followed by a unique number (*e.g.*, user-search-1, user-search-2, and so on). In block 502, the component retrieves the content from the attribute or the PCDATA in accordance with the tag instructions. In block 503, the component adds a name and value pair to the custom content bundle that maps of the content identifier to the retrieved content. In block 504, the component generates the include content tag replacement for the content. In block 505, the component stores the replacement for the content into the tag and then returns.
